

The absolutely awesome unit37

(ab)using free stuff since forever

NOW IN PDF

The What? (start here)

You are probably wondering what exactly you are looking at. I must admit that this is a valid question indeed.

Well, you are looking at **unit37**, but you probably already noticed that. But what is it exactly. Well, that is not so easy to explain.

It's a web server, that's for sure. But what does it serve? Well let's start by defining what it doesn't serve.

But why PDF

Think about it. Long gone are the days of plain HTML. Now everyone wants to have full control over how their website looks. But if you want an easily sharable document that looks everywhere the same, there is already a tool for that. It's called PDF:

- Easy to make (just use a word processor)
- Supported everywhere
- No external CSS/JS
- Can use JS
- Can be printed and put on a wall

WARNING, UNIT37 IS NOT RESPONSIBLE FOR ANY EYEBLEED CAUSED BY ANY OF IT'S CONTENT
You have been warned!!

Who am I?

I'm not all that known to be honest, but to the few people who know about me, I'm known as *de-alchmst* (or *De-Alchmst* if you want to feel fancy).

Believe it or not, I also have a website that does not look like your kid opened Word for the first time. It's right [here](#) (on ^C).

This is where I have my blog and gallery and serious stuff in general. I'm trying to make it as minimal as possible, but sometimes I feel like making something a bit more... *experimental*, shall we say.

So what is this for then?

Unit37 is a place where I put all the things that don't belong on ^C. I put here crazy graphics, I put here experimental projects, and I run here my servers that I cannot run on ^C (because that would be impolite).

Here are some highlights:

- [ex:forth](#) – the scuffed language
- [SearXNG instance](#)
- [Digital photogallery](#)
- The [Wall of Shame!!!](#)
- [Analonowhere Search](#)
- [AI website experiment](#)
- [Melancholy](#) surrealist programming project
